PRACTICAL-11

Problem Definition

Create a student management module to add, view, edit, delete, search and filter student records. All database operations must use MYSQLi statements and clear success/failure messages.

Registration.php

```php
<?php
include "db.php";

$message = "";
$messageType = "";

if (isset($_POST["submit"])) {
    $name = trim($_POST["name"] ?? "");
    $email = trim($_POST["email"] ?? "");
    $mobile = trim($_POST["mobile"] ?? "");
    $course = trim($_POST["course"] ?? "");

    if ($name === "" || $email === "" ||
        $mobile === "" || $course === "") {
        $message = "Please fill all fields.";
        $messageType = "error";

    } elseif (!filter_var($email, FILTER_VALIDATE_EMAIL)) {
        $message = "Enter a valid email.";
        $messageType = "error";

    } elseif (!preg_match("/^[0-9]{10}$/", $mobile)) {
        $message = "Enter a valid 10 digit mobile number.";
        $messageType = "error";

    } else {
        $stmt = mysqli_prepare(
            $conn,
            "INSERT INTO students (name, email, mobile, course)
             VALUES (?, ?, ?, ?)"
        );

        mysqli_stmt_bind_param(
            $stmt, "ssss", $name, $email, $mobile, $course
        );
```

```
        if (mysqli_stmt_execute($stmt)) {
            $message = "Registration successful!";
            $messageType = "success";
        } else {
            $message = "Registration failed: " .
                       mysqli_stmt_error($stmt);
            $messageType = "error";
        }

        mysqli_stmt_close($stmt);
    }
}
?>

<!DOCTYPE html>
